Creative Electron Expands NDT and FOD Market Reach Through Strategic Partnership with Kodex, Inc.

San Marcos, CA — February 2026 — Creative Electron, a U.S.-based developer of X-ray and computed tomography (CT) inspection systems, is pleased to announce a new partnership with Kodex, Inc. as an authorized distributor for its Non-Destructive Testing (NDT) and Foreign Object Detection (FOD) solutions.

With more than 45 years of industry experience, Kodex, Inc. brings deep technical expertise across a diverse range of applications. The company's capabilities include advanced computed tomography (CT), high-resolution X-ray inspection, and large-format systems designed to evaluate complex components — from engine assemblies to aerospace structures. Kodex also has a distinguished background in specialized fields such as counterfeit art detection, fire insurance investigations, litigation support, and expert testimony.

In addition to industrial NDT, Kodex, Inc. serves the broader security sector, supporting Department of Defense programs and law enforcement agencies with proven X-ray technologies for critical inspection and investigative requirements.

Through this partnership, Creative Electron's innovative object detection and NDT systems will be supported by Kodex's decades of application knowledge, technical service expertise, and established customer relationships. The collaboration strengthens Creative Electron's presence across aerospace, defense, security, and industrial markets while expanding access to reliable, high-performance X-ray and CT solutions.

"Partnering with Kodex allows us to better support customers who need advanced inspection capabilities and hands-on technical expertise," said Dr. Bill Cardoso, Founder, President, and CEO of Creative Electron. "They bring decades of real-world experience across demanding applications, and that makes them a strong partner as we expand further into high-reliability markets."

About Creative Electron

Creative Electron is a US-based manufacturer of advanced X-ray inspection systems serving industries including medical device manufacturing, electronics, and even counterfeit art detection. Our systems range from offline operator-driven inspection interfaces to fully automated inline solutions that deliver fast, precise analysis and decision-making. We are passionate about the science and community behind the partners and industries we collaborate with. Together we develop innovative X-ray solutions that solve real-world challenges.
