FOR IMMEDIATE RELEASE

EMS Solutions Participates in HIPE 2026 with Aerospace and Defense Supply Chain Leaders

OGDEN, UTAH — May 2026 — EMS Solutions, a premier regional provider of Electronics Manufacturing Services (EMS), recently participated in the Hill Industry Partner Exchange (HIPE) at the Ogden Eccles Conference Center in Utah.

Misty Sessions, Business Development/Sales, EMS Solutions at HIPE 2026

HIPE is built around a simple idea: bring together the people directly involved in the aerospace and defense supply chain – manufacturers, suppliers, military representatives, and government stakeholders – so conversations happen face to face instead of across emails and contracts. With Hill Air Force Base nearby, the event has become a practical forum for discussing what programs actually need right now, not just long-term planning or theory.

This year's discussions centered around production capacity, supplier readiness, and how companies are working through constraints across aerospace and defense programs. Rather than presentations alone, much of the value came from direct conversations between buyers, engineers, and manufacturing partners.

EMS Solutions spent the three days meeting with customers, suppliers, and program contacts to talk through real production requirements, including what is working in current builds, where delays are showing up, and where additional manufacturing support is needed. The focus stayed on day-to-day realities of building and delivering hardware for aerospace and defense applications.

EMS Solutions supports customers across aerospace, military, medical, industrial, RF, and consumer markets with electronics manufacturing services including PCB assembly (SMT and thru-hole), IPC-A-

610 Class II and III builds, RoHS and non-RoHS production, cable and harness assemblies, box build and final assembly, and test support. The company also provides design collaboration, new product introduction builds, and turnkey or consignment supply chain solutions across low, medium, and high-volume programs.

Founded in 2000, EMS Solutions has grown from a small contract manufacturer into a regional EMS partner supporting both local and out-of-state customers. Located in Ogden at the base of the Wasatch Mountains, EMS Solutions operates a facility positioned near Salt Lake City's transportation network and provides local pickup and delivery for Northern Utah customers using company-operated logistics.

HIPE continues to serve as a meaningful touchpoint for organizations working within the defense supply chain, and EMS Solutions views participation as part of its ongoing effort to stay closely connected to the industries it supports.
