EMS Solutions Joins Industry Leaders at Project Alta Summit in Utah

OGDEN, UTAH — May 2026 — EMS Solutions, a premier regional provider of Electronics Manufacturing Services (EMS), recently participated in the Project Alta Summit hosted by 47G | Utah Aerospace and Defense, bringing together companies, policymakers, and infrastructure leaders working to put advanced air mobility into real use.

Misty Sessions & Aaron Chapman at Project Alta Summit

The summit centers on practical deployment—how electric and autonomous aircraft can be integrated into transportation networks, emergency response, and logistics systems. It brings together the full range of contributors needed to make that happen, from manufacturers to regulators.

For EMS Solutions, the event connects directly to the type of work its customers are doing. Many of the systems being discussed rely on complex electronics that require reliable, high-quality manufacturing.

Founded in 2000, EMS Solutions has grown from a small contract manufacturer into a regional partner supporting both local and out-of-state customers. The company operates out of Ogden,

Utah, near Salt Lake City's transportation network, and offers local pickup and delivery for Northern Utah customers using its own logistics.

By attending the Project Alta Summit, EMS Solutions is staying close to the companies and technologies shaping the next phase of aerospace and mobility.
