FOR IMMEDIATE RELEASE**EVS International Brings High-Impact Solder Recovery Technology to productronica India**

April 2026 — EVS International, the leader in solder recovery, will exhibit its advanced EVS 18KLFHS solder recovery system at productronica India, taking place April 8–10 in Noida, New Delhi. EVS will be exhibiting alongside its India distributor, Melectronics Marketing Services, in Hall H14, Booth F01.

As solder prices continue to reach historic highs, manufacturers are increasingly seeking ways to reduce material costs and improve operational efficiency. EVS International will demonstrate how its technology enables electronics manufacturers to significantly cut monthly solder expenses by recovering valuable material directly from production waste.

The EVS 18KLFHS is engineered to recover up to 80% of reusable, high-purity solder from dross—material that is often sold back to suppliers at a fraction of its original value. By reclaiming this solder in-house, manufacturers can dramatically reduce waste, lower procurement costs, and maintain greater control over their materials.

Designed with both performance and safety in mind, the system features a fully sealed cabinet with integrated fume extraction, helping create a cleaner and safer working environment while supporting compliance with modern health and safety standards.

At the core of the EVS 18KLFHS is the company's patented tilting pot and hot air-activated auto drain tap, which streamline operation and produce consistently high-quality solder ingots with minimal operator involvement. With a large 18 kg (40 lb) capacity, the system can reduce dedrossing time by up to 75%, increasing throughput while minimizing production downtime.

"The rising cost of solder continues to impact manufacturers globally," said Simon Norman, General Manager at EVS International. "Our technology allows customers to take control of those costs by recovering and reusing their own materials—turning what was once waste into a valuable asset."

Attendees of productronica India are invited to visit Hall H14, Booth F01, to see the EVS 18KLFHS in action and learn how much they can save on monthly solder purchases.
