## Green Circuits Expands Global Footprint with Addition of Canada-Based Manufacturing Operation

**SAN JOSE, CA — June 2026 —** Green Circuits, a full-service electronics manufacturing services (EMS) partner to leading OEMs in aerospace and defense, medical and life sciences, industrial electronics, and semiconductor and AI hardware markets, today announced the expansion of its organization with the addition of a Canada-based operation that will operate under the Green Circuits brand.

The facility, located in London, Ontario, will integrate the long-standing expertise of OES Manufacturing into the Green Circuits organization. This move represents a strategic step in strengthening the company's capabilities while expanding its geographic reach to better support customers across North America.

OES Manufacturing brings more than 45 years of experience in rapid electronic prototyping, manufacturing, and assembly. Known for its speed, flexibility, and engineering-driven approach, the company has developed more than 1,000 EMS prototype designs, supports products used in over 67 countries, and holds 16 patents.

By bringing OES under the Green Circuits name, the organization adds a well-established operation with deep technical expertise and a strong track record across multiple industries, including environmental, healthcare, automotive, and defense.

The London, Ontario facility provides a full range of in-house EMS capabilities, including PCB assembly, prototyping and new product introduction (NPI), and electronic engineering and design services.

“This is an important step for Green Circuits as we continue building a stronger and more capable organization,” said Michael W. Hinshaw, Jr., Chief Executive Officer of Green Circuits. “OES has a long history of technical excellence and customer-focused execution. Bringing that experience into the Green Circuits team allows us to better support our customers with expanded capabilities and a broader operational footprint.”

With this expansion, Green Circuits is further positioned to support programs ranging from early-stage prototyping through full-scale production, while maintaining the responsiveness and quality standards customers expect.
