Green Circuits Heads to the Del Mar Show with High-Speed SMT and Engineering-Driven PCB Assembly Solutions

SAN JOSE, CA — April 2026 — Green Circuits, a full-service Electronics Manufacturing Services (EMS) partner to leading OEMs, will exhibit at the Del Mar Electronics & Manufacturing Show at the Del Mar Fairgrounds in San Diego, California from April 22-23, 2026. Attendees are invited to visit Booth #638 to learn more about the company’s advanced PCB assembly capabilities and engineering-driven approach to electronics manufacturing.

With more than 30 years of experience, Green Circuits supports customers from early-stage prototypes through low- to mid-volume production. The company works across a range of board types—including single-layer, multi-layer, rigid, and flexible circuits—bringing a practical, hands-on engineering mindset to every build. Its operation features five high-performance SMT lines equipped with Juki placement systems, allowing for fast, precise assembly of complex designs, particularly in demanding applications like medical electronics.

What sets Green Circuits apart is how closely its engineering and manufacturing teams work with customers to solve problems early and keep programs moving. From quick-turn quotes—often delivered within hours—to around-the-clock support, the focus is on helping customers stay on schedule without sacrificing quality. The company's ability to scale production smoothly from prototype to full build also makes it a reliable partner for programs that need flexibility as they grow.

Green Circuits' services include advanced testing, system-level integration, and tightly controlled manufacturing processes designed to meet strict regulatory and performance standards. The company maintains a robust quality system and holds key certifications, including ISO 13485:2016, IPC-A-610 Class 3, IPC-A-620, J-STD-001, and NIST SP 800-171 compliance.

Attendees at the Del Mar Electronics & Manufacturing Show are encouraged to stop by Booth #638 to meet with the Green Circuits team, discuss upcoming projects, and see how their engineering-focused approach can help bring products to market faster and with greater confidence.
