## Green Circuits Reports Strong Delivery and Quality Performance as Demand Scales

**SAN JOSE, CA — March 2026** — Green Circuits, a full-service Electronics Manufacturing Services (EMS) partner to leading OEMs, continues to deliver consistent performance across its operations, reporting a 98% average customer scorecard rating, less than 1% average RMA, and 99% on-time delivery.

At a time when many manufacturers are navigating increased product complexity, supply chain variability, and tighter production timelines, maintaining steady results across quality and delivery metrics remains a challenge. Green Circuits' latest figures point to a disciplined approach to execution across programs, with a focus on predictability and repeatability.

Rather than prioritizing growth at the expense of consistency, the company has concentrated on maintaining stable processes and cross-functional alignment as volumes scale. The result is a production environment where customers can expect reliable outcomes from build to build.

“Our customers rely on us to deliver without surprises,” said Adam Szychowski Vice President of Sales and Marketing, Green Circuits. “Consistency across quality and delivery isn’t something that happens by accident—it’s built into how our teams plan, communicate, and execute every program.”

Green Circuits attributes its performance to close coordination between engineering, supply chain, and production teams, along with a continued focus on process control and long-term customer relationships.

The company recently brought together its sales and leadership teams to review performance and align on maintaining these standards as demand continues to grow.
