## Green Circuits to Discuss Space-Ready Electronics Manufacturing to Space Tech Expo USA

**SAN JOSE, CA — May 2026 —** Green Circuits, a full-service electronics manufacturing services (EMS) partner to leading OEMs in aerospace and defense, medical and health technology, industrial electronics, and semiconductor and AI hardware markets, will exhibit at Space Tech Expo USA 2026, taking place June 2–4 in Anaheim. The event brings together hundreds of companies across the space supply chain, offering a chance to connect directly with teams working on next-generation systems.

At Booth 424, Green Circuits will focus on what it does best: building complex electronics that need to work the first time—and keep working. The company supports aerospace, space, and satellite programs with PCB assembly and system integration for applications where reliability isn't optional.

Green Circuits specializes in high-mix builds and assemblies with tight tolerances, supporting customers from early prototypes through full production. Its processes are built around traceability, documentation, and consistency—requirements that are standard in space programs but not always easy to execute at scale.

The company is ITAR compliant and certified to IPC and J-STD-001 standards, including space addendum requirements. That foundation, combined with in-house engineering support, allows Green Circuits to handle everything from satellite electronics to deep-space payloads.

As a full-service EMS provider, Green Circuits works with OEMs on design, prototyping, and production of printed circuit boards and complete systems. With more than 30 years of

experience, the company has built a reputation for taking on challenging builds and delivering them without cutting corners.

Visitors to Booth 424 can meet with the team to talk through specific programs, production needs, or simply compare notes on where the industry is heading.

To schedule dedicated time at the booth, contact [info@greencircuits.com](mailto:info@greencircuits.com).
