FOR IMMEDIATE RELEASE

K & F Electronics Invests in Workforce Training with IPC-A-610

Fraser, MI — May 2025 — In a strategic move to prioritize employee development and uphold quality standards, K & F Electronics, a third-generation, family-owned printed circuit board (PCB) manufacturer based in Fraser, Michigan, used a recent period of reduced production to certify its employees in IPC-A-610, the industry standard for the acceptability of electronic assemblies. This initiative not only enhanced the skill set of its workforce but also reinforced the company's dedication to quality and continuous improvement.

"Rather than implementing layoffs during our slower months, we chose to invest in our team's skills," said Sean Kincaid, President of K & F Electronics. “This decision meant our employees became more experienced, which means better quality work for our customers and fewer mistakes on the job.”

Established in 1972, K & F Electronics has built a reputation for delivering high-quality printed circuit boards (PCBs) and assemblies. The company's proactive approach to workforce development underscores its dedication to excellence and adaptability in the electronics manufacturing industry.

###

About K & F Electronics
Founded in 1972, K & F Electronics is a family-owned and operated printed circuit board (PCB) manufacturer based in Fraser, Michigan. With over five decades of experience, the company specializes in delivering high-quality, American-made PCBs and assemblies to a diverse range of industries, including automotive, industrial, medical, and defense sectors.

Operating from a 30,000-square-foot facility, K & F Electronics offers comprehensive services encompassing PCB design, fabrication, assembly, and full box builds. The company's commitment to excellence is underscored by its adherence to industry standards, holding certifications such as ISO 9001:2015, IPC-6012 Class 1–3, UL approval, and ITAR registration.

K & F Electronics prides itself on its customer-centric approach, emphasizing flexibility, responsiveness, and dedication to quality. By investing in advanced technologies and continuous workforce development, the company ensures that it meets the evolving needs of its clients while maintaining the highest standards of manufacturing excellence.
