FOR IMMEDIATE RELEASE

Arcadia and Kubler US to Showcase Advanced Smart Storage and Incoming Solutions at APEX

NEW YORK, NY – February 2026 – Arcadia, in partnership with Kubler US, is pleased to announce its participation at the upcoming APEX exhibition, where the companies will present two innovative solutions designed to optimize material handling and storage in modern electronics manufacturing environments.

At booth 927 during APEX, Arcadia and Kubler US will exhibit the Arcadia Smart Rack Archimede 2.0, a next-generation smart storage system featuring integrated pick-by-light technology. With a capacity of up to 1,200 reels of 7-inch components on 5 square feet, the Archimede 2.0 stands out as the most compact and flexible smart storage system in its class currently available on the market. Designed for maximum space efficiency and fast, error-free picking, the system significantly improves inventory control, traceability, and operational productivity.

In addition, visitors will be able to experience the Incoming Table Galileo, Arcadia’s intelligent solution for incoming goods inspection and material preparation. Galileo supports streamlined receiving processes, ensuring accurate verification, registration, and organization of components before they enter production or storage.

By showcasing these systems at APEX, Arcadia and Kubler US reaffirm their commitment to delivering smart, scalable, and future-ready solutions that address the growing demands of electronics manufacturing and logistics.

Visit Arcadia and Kubler US at APEX to discover how smart storage and intelligent incoming processes can transform your production flow.
