Metal Etch Services Opens New Motor City Facility to Meet Growing Midwest Demand

San Marcos, CA – June 2026 – Metal Etch Services, Inc. has opened a new Midwest facility, Metal Etch Services Motor City, located in Detroit, Michigan, expanding its reach to better support customers across the central and eastern United States.

The move is a direct response to growing demand outside of Southern California, giving customers in the Midwest and East Coast a closer, more responsive option.

The new facility is equipped with advanced technology, including a Watt NEVIS stencil laser platform – the first of its kind installed in the US –as well as a Watt SE12PRO system for laser inspection, marking, and welding. The site will also support Metal Etch Services' next-generation NanoPearl coating process.

To maintain the level of service customers have come to expect, CAD design and customer support will continue to be handled from the company's California headquarters. This allows the team to expand production capacity without losing the hands-on collaboration and responsiveness that built its reputation.

Founded in 2005 by a group of industry veterans, Metal Etch Services has long focused on combining technical expertise with a strong customer-first approach. With roots in stencil and screen manufacturing dating back to 1983, the team continues to invest in new equipment, training, and process development to keep pace with evolving industry needs.

Metal Etch Services provides laser-cut stencils for PCB assembly, a full range of screen options, and precision thin metal parts used across electronics, medical, and industrial applications.

As the company grows, its approach remains the same: business is earned, not given. The new Motor City facility reflects that mindset, expanding capabilities while staying focused on service, quality, and long-term customer relationships.
