MILWAUKEE ELECTRONICS' US FACILITIES NOW AS9100 Certified

Portland, OR – Milwaukee Electronics today announced that its facilities in Portland, OR and Milwaukee Electronics have both completed the registration process for AS9100:2016. The registrar is DQS Inc. Both facilities are also ITAR-registered.

“We are seeing increasing opportunities in the defense sector as well as commercial avionics. Our AS9100 certification combined with our ITAR registration position us as an excellent source for US-based manufacturing in these sectors,” said Jered Stoehr, Milwaukee Electronics’ CEO.

About Milwaukee Electronics

Milwaukee Electronics (www.milwaukeeelectronics.com) is an electronics manufacturing services (EMS) company bridging the gap between traditional forecasted manufacturing and the future of online, on-demand manufacturing. Established in 1954, it has proven staying power as one of the longest established manufacturing service providers in the country. That staying power comes from a philosophy of constant innovation combined with the traditional customer-first values of a privately held family business.

Milwaukee Electronics manufactures custom printed circuit board assemblies (PCBA) for the medical, telecommunications, transportation, military and other industries. The company operates over 135,000 square feet of manufacturing in Portland, Oregon; Milwaukee, Wisconsin; and Tecate, Mexico. In addition to EMS, it offers quick-turn prototyping through its Screaming Circuits business unit.
