NanoFlowX Announces Strategic Partnership with Bentec Ltd to Accelerate PCB Protection Innovation Across Europe and India

MILWAUKIE, OR — December 2025 — NanoFlowX, the leader in ultra-thin protective coatings for electronics, is proud to announce a strategic partnership with Bentec Ltd. Under this agreement, Bentec has been appointed to recruit, support, and manage a dedicated network of representatives across Europe and India.

This partnership significantly expands NanoFlowX's global footprint and strengthens its mission to bring safer, more efficient, and more sustainable PCB protection technologies to manufacturers worldwide. NanoFlowX's proprietary nanocoating platform offers a transformative alternative to traditional conformal coatings. With no masking required, electronics manufacturers can dramatically reduce preparation time, labor costs, and production bottlenecks. Unlike conventional coatings, NanoFlowX-treated PCBs remain fully reworkable, delivering lower waste, easier repairs, and streamlined workflows.

"We are thrilled to partner with Bentec Ltd as we scale our presence across Europe and India," said Rick Fung, CEO, NanoFlowX. "Bentec's strong industry relationships and proven technical expertise make them the ideal partner to introduce our nanocoating technologies into these key regions. Together, we're bringing a more sustainable, higher-performance coating solution to manufacturers searching for better ways to protect their electronics."

As part of the partnership, Bentec will lead NanoFlowX's regional expansion strategy, including market development, technical education, and establishing a robust representative network to support local customers and OEMs.

This collaboration marks an important milestone in NanoFlowX's global growth strategy and reinforces the company's commitment to replacing outdated, chemical-heavy conformal coating processes with environmentally conscious, cost-saving nanocoating solutions.

About NanoFlowX

NanoFlowX is a leading innovator in nanocoatings, providing fast, easy-to-apply protective solutions that safeguard electronic devices and PCBs from water, dust, corrosion, and other environmental hazards. Their high-performance, non-toxic coatings deliver reliable, long-lasting protection across industries including medical, aerospace, defense, and consumer electronics.

About Bentec Ltd

Bentec Ltd is a specialist provider of inspection, testing, and manufacturing solutions, partnering with global technology leaders to deliver innovative systems across the electronics and industrial sectors.
