Rehm Thermal Systems Opens Its Own Subsidiary in India

The technology leader for thermal systems strengthens its presence with "Rehm Thermal Systems India" in Bengaluru

Rehm Thermal Systems has officially opened its new subsidiary, Rehm Thermal Systems India, in Bengaluru. With this new location, the company moves closer to electronics manufacturers in India to better tap market potential, shorten service routes, and provide direct on-site process consulting. The local presence underscores Rehm's commitment to strengthening customer proximity, process stability, and sustainable growth in the Indian market.

The foundation for expanding business in India was laid back in 2022 with the opening of the first local service location in Bangalore. Positive market development and the high demand for process-oriented support have now enabled the next step: the establishment of a fully-fledged Rehm subsidiary with its own sales, service, spare parts warehouse, and applications center in Bengaluru.

Local Expertise for Customers in Southern India

On October 24, 2025, the new Rehm subsidiary in Bengaluru was officially inaugurated during a traditional Indian opening ceremony. This festive occasion marked the beginning of a new chapter for Rehm Thermal Systems in India. The accompanying information and networking event for customers and partners — featuring presentations on strategic direction as well as live demonstrations in the new applications center — was very well received by the guests.

The applications center of Rehm India offers customers the opportunity to conduct process trials and tests directly on-site. This enables Rehm to support its partners in real-time process consulting and optimization — a key advantage for electronics manufacturing in a dynamic growth region.

The new subsidiary is headed by Sreekanth Krishnamurthy, who has been part of the Rehm team for many years. He began his career as a service technician, is now a Regional Sales Manager, and knows Rehm systems in detail. With his extensive experience in electronics manufacturing, he will coordinate all decentralized service operations in India and serve as the main contact for sales, applications, and service.

"Being innovative means continuous development and closeness to the customer. With the new Rehm subsidiary in Bengaluru, we can support our customers in southern India even more directly and accompany their processes more effectively," explains Sreekanth Krishnamurthy.

A Strong Signal for the Indian Market

With the establishment of Rehm India, the company is responding to the steadily growing market volume in the Indian electronics industry. Supported by the country's economic dynamism, government incentive programs, and strong demand for electronic components, India is increasingly becoming one of the most important markets for international electronics production.

Rehm Thermal Systems stands worldwide for quality, innovative technologies, and reliable service — and with the new location in Bengaluru, this commitment is now being implemented even more consistently in practice.

About Rehm Thermal Systems

Rehm Thermal Systems is an expert in connection technologies for electronics manufacturing. With innovative system solutions for soldering, drying and coating, we enable our customers to create their own reliable connections on electronic assemblies – customised, process-safe and future-oriented.

Since 1990, we have been developing and manufacturing energy-efficient production equipment to the highest quality standards at our headquarters in Germany and an additional production site in China. Our global subsidiaries and distributors provide tailor-made solutions and expert service – wherever electronics are produced.

Create your Connections – with Rehm, you shape the connection technology of tomorrow.
