FOR IMMEDIATE RELEASE

RBB Systems Honors David Hill for 45 Years of Service and Contribution to Manufacturing Operations

WOOSTER, OH — April 2026 — RBB, a trusted leader in electronics manufacturing since 1973, is proud to recognize David Hill, Document Specialist and Materials Specialist, for his 45-year service anniversary.

David began his journey with RBB in February 1981 through a vocational school placement program and transitioned into a full-time role later that year. Since then, he has remained a consistent presence through decades of growth, facility expansions, and evolving manufacturing technologies.

In the company's early years, RBB operated as a highly hands-on manufacturing environment where employees supported multiple stages of production. David contributed across the full build process, including PCB drilling, assembly, potting, conformal coating, and testing, as well as PCB etching and Metalphoto imaging. This broad exposure provided him with a strong foundation in electronics manufacturing operations from start to finish.

In the mid-1990s, David transitioned into the Stockroom, where he has continued to support operations through multiple facility locations and periods of expansion. In 2011, his role expanded again to include printing routers and production documentation—work that helps maintain accuracy and efficiency across manufacturing workflows and supports RBB's production teams in meeting delivery requirements.

Beyond his core responsibilities, David has trained employees in stockroom processes and documentation procedures and has supported customer tours and internal activities. His experience and steady presence have made him a dependable resource across the organization.

A certified J-STD-001 Application Specialist, David applies a strong understanding of industry workmanship standards and quality expectations in his daily work.

“Forty-five years is a long time, and I’ve had the opportunity to grow alongside RBB through many changes. I’m grateful for the experiences, the people I’ve worked with, and the support I’ve received throughout my career,” said Hill.

David’s tenure reflects both personal dedication and the long-term stability of RBB Systems, a company known for delivering SMT and through-hole PCB assembly, mixed-technology builds, and turnkey manufacturing solutions, as well as operating a UL 508A-certified panel shop for electromechanical integration and control systems. Across its operations, RBB emphasizes quality, process control, and hands-on engineering support—principles David has embodied throughout his career.
