RBB Expands Facility to Support Continued Growth and Increased Production Capacity

WOOSTER, OH — April 2026 — RBB, a trusted leader in electronics manufacturing since 1973, has expanded its facility by 3,500 square feet to support continued growth and increasing customer demand.

The added space provides flexibility to streamline workflow and prepare for future capacity increases, including the potential addition of another SMT line. It also allows for better organization of existing operations, such as relocating inventory and material storage to improve overall production efficiency.

“As demand continues to grow, it’s important that we stay ahead of our customers’ needs,” said Carrie Guenther, Sales & Marketing Manager. “This expansion gives us the room to enhance our operations today while positioning us for additional SMT capacity and future growth initiatives.”

RBB offers a full range of PCBA services, including surface mount and through-hole assembly, inspection, testing, and box build. The company supports both prototype and production volumes, working with customers across industries that require consistent quality and reliable turnaround.

The facility expansion creates space for future equipment and process improvements, helping RBB maintain efficient throughput as volumes increase and positioning the company to take on new programs.
