FOR IMMEDIATE RELEASE

RBB Heads to PCB Detroit to Tackle Complex Builds and Real-World Manufacturing Challenges

WOOSTER, OH — May 2026 — RBB, a trusted leader in electronics manufacturing since 1973, will exhibit at PCB Detroit, taking place June 15-16, 2026, on the campus of Wayne State University. The event brings together engineers, designers, and manufacturers focused on printed circuit board design and production, and RBB will be on site to talk through how it supports customers' assembly needs.

RBB has built its reputation around steady, reliable electronics manufacturing, particularly for programs that don't fit neatly into high-volume models. The company focuses on low- to mid-volume production, supporting everything from early-stage builds to long-running products that still need consistent quality and attention.

RBB's capabilities cover both surface mount and through-hole assembly, including mixed-technology builds that require a more hands-on approach. The team works with customers on both turnkey and consignment projects, adjusting to what each program requires rather than forcing a one-size-fits-all process.

In addition to PCB assembly, RBB operates a UL 508A-certified panel shop, providing full system integration and control panel builds. With in-house testing and close engineering involvement, the company supports projects that go beyond the board level.

Attendees are encouraged to stop by and connect with the RBB team during the event.
