## SAKI's AI Solution Receives the 2026 NPI Award (Software Category)

SAKI's AI Solution has been recognized with [the 2026 NPI Award](#) in the Software – Production category. This award highlights technologies that contribute to innovation in the electronics manufacturing industry. This recognition reflects the industry's evaluation of SAKI's efforts to enhance inspection quality and operational efficiency through AI technology.

This recognition reflects the industry's evaluation of SAKI's efforts to enhance inspection quality and operational efficiency through AI technology.

### About SAKI AI Solution

SAKI AI Solution is an AI-based platform designed to improve the reliability and efficiency of inspection processes. Key features include:

- AI Studio – Enables intuitive AI model training, testing, and visualization
- AI Assist – Helps reduce false calls and decreases re-inspection workload
- AI OCR – Automates text inspections and adapts to variations in printed characters

The platform also provides visualization of AI decision factors, allowing users to understand why a component is judged as OK or NG. It integrates smoothly with existing AOI systems and can be introduced even with a small set of OK images.

### Future Development

SAKI will continue to develop solutions that support step-by-step AI utilization, enabling more efficient and reliable inspection workflows. Future updates — beginning with AI Programming — are planned to extend AI capabilities to SPI and AXI processes as well.
