FOR IMMEDIATE RELEASE

SCS to Host Webinar on Ultra-Thin Parylene and Multilayer Coating Technologies

May 14, 2025 (Indianapolis, IN) – Specialty Coating Systems (SCS) is pleased to announce its upcoming webinar, Superior Environmental Protection with Ultra-Thin Parylene and Multilayer Coatings, scheduled for Thursday, May 21, 2026, at 2 p.m. EDT. The webinar is free to attend and is now open for registration at scswebinars.com.

This 60-minute technical session will address the growing need for highly reliable, conformal protective coatings as electronic devices and components are increasingly required to operate in demanding environments. Attendees will gain insight into the latest advancements in ultra-thin parylene coatings and hybrid multilayer technologies that combine parylene with atomic layer deposition (ALD) to deliver superior environmental protection.

Participants will learn how these advanced coating solutions provide exceptional barrier performance against moisture, chemicals and corrosive elements while maintaining precise nanoscale thickness control. The session will also explore the unique material properties of parylene, the advantages of integrating ALD layers and how multilayer coating technologies overcome the limitations of traditional coating approaches.

Rakesh Kumar, Ph.D., SCS Vice President of Technology, and Tim Seifert, SCS Aerospace & Defense Market Manager, will discuss how parylene and multilayer coatings enable long-term reliability across a range of applications, including aerospace, defense, medical devices, automotive and commercial and consumer electronics. An interactive Q&A session will follow the presentation, allowing attendees to ask questions and receive expert insights.

The webinar will be available on demand for 12 months and is linked on SCS's webinars page at scswebinars.com. For more information about SCS, please visit scscoatings.com.

About Specialty Coating Systems

Headquartered in Indianapolis, IN, SCS is a world leader in conformal coating services and technologies. As the

direct descendant of the companies that originally developed Parylene, SCS has 55 years of experience and expertise that it leverages for its customers through coating facilities throughout the Americas, Europe and Asia. The company also offers industry-leading liquid coating systems including spray, spin and dip coating systems and ionic contamination test systems. For more information on SCS, please visit scscoatings.com.
