SP Manufacturing Heads to Medtec China 2026 with Full-Service Medical Manufacturing Capabilities

Singapore — August 2026 — SP Manufacturing Pte Ltd., a leader in comprehensive electronic manufacturing services, will exhibit at Medtec China 2026, taking place September 1–3 in Shanghai, China. The event is one of the region’s key gatherings for medical device manufacturers and suppliers, bringing together companies focused on building and scaling next-generation medical technologies.

For SP Manufacturing, the show is a chance to reconnect with customers in the region and have more direct conversations with companies working through real production challenges—from early-stage builds to volume manufacturing.

At Medtec China, SP will highlight its work in wire harnesses, PCB assemblies, box build assemblies, HMI products, and engineering support for medical and life sciences applications. These capabilities are often pulled together on the same program, especially for devices that need tight integration and consistent performance across multiple subsystems.

SP Manufacturing works with customers across the full product lifecycle, from initial builds and design support through to full production. The company is regularly brought in on projects where quality requirements are high, documentation is strict, and there’s little room for error once a product moves into production.

Its certifications—including ISO 13485, AS9100D, IATF 16949, ISO 9001, and ISO 14001—along with compliance to IPC-A-610, IPC/WHMA-A-620, FDA, UL, and CSA standards, reflect the environments its customers operate in and the expectations those markets demand.

“Medtec China brings together a lot of the companies we work with day-to-day, along with new teams facing similar challenges,” said Jackson Tan, Global Business Development Director, SP Manufacturing. “It’s a good opportunity to sit down, talk through builds, and figure out what actually works when products move from design into production.”

Visitors are encouraged to meet with the SP Manufacturing team during the show to discuss current projects and explore how the company supports medical device manufacturing at different stages.
