

FOR IMMEDIATE RELEASE

VJ Electronix Partners with The Murray Percival Company to Expand Support Across the Midwest

May 2026 — VJ Electronix, Inc., the leader in rework technologies and global provider of advanced X-ray inspection and component counting systems, has appointed The Murray Percival Company as its manufacturers' representative for Illinois and Southern Wisconsin.

A third-generation, family-owned business with more than 60 years of experience, The Murray Percival Company is well known throughout the PCB and electronics assembly industry for its technical knowledge and strong customer relationships. The company supports manufacturers with a broad range of assembly equipment, materials, and production solutions, along with a focus on helping customers improve processes and maximize return on investment.

Through this partnership, Murray Percival will represent VJ Electronix's full line of solutions, including automated rework systems, X-ray inspection platforms, and component counting systems. The goal is simple—provide local support and help manufacturers solve real production challenges with practical, proven technology.

“Bruce Clark and the Murray Percival team bring a deep understanding of the industry and a long track record of supporting customers the right way,” said Don Naugler, General Manager at VJ Electronix. “Their approach aligns well with how we work, and we’re looking forward to building on that in the Midwest.”

Bringing Murray Percival on board gives VJ Electronix a stronger local presence in a region with a solid base of electronics manufacturing, making it easier for customers to access support and expertise when they need it.

VJ Electronix continues to grow its North American rep network to stay closer to customers and respond more quickly.
