

**FOR IMMEDIATE RELEASE**

## **VJ Electronix Enhances Digital Experience to Support Next-Generation Rework Applications**

*New website launch expands access to technical resources as demand grows for large-format, high-density assembly solutions*

*March 2026 — VJ Electronix, Inc., the leader in rework technologies and global provider of advanced X-ray inspection and component counting systems, today announced the launch of its newly redesigned website, created to better support electronics manufacturers navigating increasingly complex rework challenges.*

The new site delivers an improved user experience along with expanded access to technical resources, product information, and application insights—helping engineers and manufacturing teams more efficiently evaluate solutions for advanced rework processes.

The redesign comes on the heels of the company’s recent introduction of the Summit LT150 Rework System, developed to address the growing demand for reworking large, high-density assemblies used in AI, power electronics, and other advanced applications.

“As our customers take on more complex assemblies and larger components, access to clear, detailed technical information becomes even more critical,” said Don Naugler, General Manager of VJ Electronix. “Our new website is designed to make it easier for engineers and production teams to find the information they need and identify the right solutions for their specific applications.”

In addition to streamlined navigation and updated product content, the website provides enhanced visibility into VJ Electronix’s rework, X-ray inspection, and component counting solutions. Visitors can more easily explore system capabilities, compare options, and access

resources that support process optimization and decision-making.

The launch reflects VJ Electronix's continued investment in both product innovation and customer experience, ensuring manufacturers have the tools and information needed to succeed as electronics assemblies continue to evolve in size, complexity, and value.

**About VJ Electronix**

VJ Electronix, Inc. manufactures production ready, automated Rework and X-ray inspection systems with many advanced capabilities. The company frequently provides custom solutions tailored to satisfy specific application requirements. VJ Electronix is a worldwide leader in X-ray Inspection and Rework equipment.
