The partnership combines Rehm's innovative selective coating and UV LED curing technologies with extensive market expertise and direct customer support on the Iberian Peninsula.

Rehm Thermal Systems is expanding its sales activities in the Spanish and Portuguese markets and has appointed **Propelec S.L.** as its new representative for the Protecto and RDS UV LED product ranges. Headquartered in Valencia, with offices in Madrid, Barcelona, and Lisbon, the company will represent Rehm's coating, dispensing and UV LED curing solutions in Spain with immediate effect.

Through this new partnership, Rehm is providing peninsula electronics manufacturers with more direct access to modern solutions for selective coating and dispensing, as well as the energy-efficient curing of conformal coatings and adhesives. Customers will benefit from support in their own language, shorter communication channels and a local contact who understands the requirements of the electronics manufacturers of the Iberian Peninsula based on many years of experience.

An Experienced Partner for the Spanish Electronics Industry

Founded in 1985, Propelec has more than four decades of experience in the distribution of machinery, equipment and technical solutions for the electronics industry.

Its extensive market knowledge, close relationships with customers and experience with demanding manufacturing processes make Propelec an ideal partner for Rehm. Technologies such as conformal coating and

dispensing require close coordination between the equipment manufacturer, local representative and end user.

The new partnership will enable both companies to support customer projects throughout the entire process – from the initial process analysis and selection of the appropriate system configuration to integration into the production environment.

“With Propolec, we have gained an established and highly competent partner with an excellent understanding of the Spanish electronics market and strong, long-standing customer relationships. Together, we will be able to provide even more comprehensive local support and offer customers tailored solutions for reliable, efficient and sustainable coating and curing processes,” explains Vasco Marta, Sales Manager for Portugal and Spain at Rehm Thermal Systems.

Handshake cooperation between Propolec and Rehm Thermal Systems (Images: Rehm Thermal Systems)

For customers on the Iberian Peninsula, the partnership primarily means greater proximity and more efficient project implementation. Technical requirements can be assessed directly on site and evaluated in close cooperation with Rehm’s application specialists. Local support will also facilitate coordination during process trials, system configuration, commissioning and the continuous optimisation of existing production processes.

“Rehm’s solutions are the ideal complement to our product portfolio for electronics manufacturing. Thanks to Protecto and RDS UV LED, we can offer our customers a complete turnkey solution featuring powerful, flexible, and future-oriented technologies for protecting electronic assemblies. We look forward to further promoting the Rehm brand across the peninsula and supporting our customers in implementing advanced coating and curing processes,” states Carlos Ribé, Director of Propolec S.L.

By appointing Propolec as its new representative, Rehm is continuing its international growth strategy while further strengthening local customer support. Both companies share a commitment to technological expertise, extensive industry experience and the development of reliable, resource-efficient and future-proof manufacturing processes for electronics producers.

THERMAL SYSTEMS

About propelec S.L.

Founded in 1985 and headquartered in Paterna, near Valencia, Propelec S.L. specializes in the distribution, marketing of turnkey projects, and technical support for high-quality machinery, equipment, and products for the electronics industry. Thanks to its extensive market experience and presence in Valencia, Lisbon, Madrid, and Barcelona, the company serves clients across the electronics manufacturing sector in the Iberian Peninsula.

About Rehm Thermal Systems

Rehm Thermal Systems is an expert in joining technologies for electronics manufacturing. With innovative system solutions for soldering, drying and coating, the company enables its customers to create reliable connections on electronic assemblies – tailor-made, process-safe and future-oriented.

Since 1990, Rehm has been developing and manufacturing energy-efficient production equipment to the highest quality standards at its headquarters in Germany and at an additional production site in China. Its global subsidiaries and distributors provide customized solutions and professional service wherever electronics are manufactured.

CREATE YOUR Connections – with Rehm, you shape the joining technology of tomorrow.
