FOR IMMEDIATE RELEASE

KYZEN's Customer-Focused Cleaning Solutions Win 2026 Service Excellence Award

NASHVILLE, TENNESSEE — September 2026 — KYZEN, a global leader in environmentally responsible cleaning chemistries, has earned a 2026 CIRCUITS ASSEMBLY Service Excellence Award (SEA) in the Cleaning category. The award was presented during the Service Excellence Awards ceremony on September 29 at the Santa Clara Convention Center during PCB West 2026.

The latest recognition continues a long history of customer-driven Service Excellence Awards for KYZEN. In 2025, the company received its 18th SEA in the Cleaning/Processing category, adding to decades of recognition for the combination of cleaning technology, technical expertise and customer support it provides to electronics manufacturers.

The Service Excellence Awards are determined entirely by direct customer feedback, making the recognition particularly meaningful to the companies receiving them. Customers evaluate suppliers based on their experiences across important areas of service and performance, providing a direct measure of how effectively suppliers support their manufacturing requirements.

“Receiving another Service Excellence Award means a great deal to our entire team because it reflects the experiences of the customers we work with every day,” said Sherry Stepp, Global Marketing Manager at KYZEN. “Developing effective cleaning chemistries is only one part of what we do. Our team works closely with customers to understand their processes, help solve cleaning challenges and provide the technical support they need to achieve consistent results. We’re grateful for their continued trust in KYZEN.”

For more than 35 years, KYZEN has worked alongside electronics manufacturers to address complex cleaning challenges with advanced chemistries and application expertise. Its solutions support manufacturers across applications ranging from advanced packaging to high-reliability electronics, where cleanliness and process consistency are critical to manufacturing performance.

KYZEN combines its cleaning technologies with technical support focused on helping customers identify and implement the right cleaning processes for their applications. This customer-focused approach has remained an important part of the company’s work as electronics manufacturing requirements and cleaning challenges have continued to evolve.
