FOR IMMEDIATE RELEASE

Absolute EMS Earns 2026 Service Excellence Award Across Seven Customer-Rated Categories

SANTA CLARA, CA — October 2026 — Absolute EMS, Inc., a provider of fast-turnaround, turnkey contract electronic manufacturing services (EMS), is pleased to announce that it has earned a 2026 CIRCUITS ASSEMBLY Service Excellence Award in the EMS \$20 million to \$100 million revenue category. Absolute EMS was recognised across seven areas of customer service: Dependability/Timely Delivery, Manufacturing Quality, Responsiveness, Technology, Value for the Price, Flexibility and Overall Satisfaction.

The recognition reflects customer feedback across a broad range of service and performance measures, highlighting Absolute EMS' commitment to supporting customers throughout the manufacturing process. The award was presented during the Service Excellence Awards ceremony on September 29 at the Santa Clara Convention Center during PCB West 2026.

The Service Excellence Awards are determined solely by direct customer feedback, with participating companies evaluated on the service and performance they provide to their customers.

"Receiving recognition across all seven areas is particularly meaningful because it reflects the experiences of the customers we work with every day," said Mark Sika, President at Absolute EMS. "Our team understands the level of trust that customers place in us to manufacture complex, high-reliability products. We work hard to earn that trust through quality, responsiveness, flexibility and consistent support throughout every program."

Headquartered in Silicon Valley, Absolute EMS provides high-reliability contract manufacturing for the medical, military and satellite industries. The company holds certifications including ISO 13485:2016, AS9100 Rev D and ISO 9001:2015, and works to manufacturing standards including IPC-A-610 Class 3 and J-STD-001 Class 3. Absolute EMS is also UL Registered and operates under NAICS: 334418.

Absolute EMS offers a range of advanced manufacturing capabilities, including touchless contract manufacturing and nitrogen reflow processes. Its services support applications across medical, military and satellite manufacturing where product reliability is critical.
