

September 2026. Europlacer Press Information. For Immediate Release

Europlacer to Showcase Connected SMT Ecosystem for High-Mix Productivity at SMTA International 2026

Europlacer will showcase its approach to high-mix productivity at SMTA International 2026, highlighting a connected ecosystem of intelligent automation, flexible SMT solutions and production management technologies at **Booth 2947**. Additionally, attendees are encouraged to register [here](#) for a customized demo with Europlacer's team at the booth.

Under the theme “**High-Mix Productivity: Smarter, More Flexible and Connected SMT Manufacturing,**” Europlacer will demonstrate how electronics manufacturers can respond to growing production complexity while maintaining efficiency, quality, and control.

Today's electronics manufacturers are increasingly challenged by greater product variety, shorter lead times, and demanding quality requirements, all while needing to maintain or improve productivity. Europlacer's SMTA International showcase will focus on how connected technologies can help manufacturers address these pressures by improving visibility across the production

process, enabling greater flexibility, and supporting smarter production decisions.

At the heart of the booth will be Europlacer's **ii-P7 screen printer** and **ii-N2 placement platform**, demonstrating flexible printing and placement capabilities designed to support demanding high-mix production environments.

These systems will be presented as part of a broader connected manufacturing ecosystem incorporating the **new EPiCENTRE**,

alongside **ii-Tab** and **ii-RC**. Together, these technologies demonstrate Europlacer's approach to providing manufacturers with greater production visibility and control across the SMT process.

The booth will also feature **Siemens Process Preparation X**, further demonstrating how integrated software and manufacturing technologies can streamline production preparation and support a more connected approach to electronics manufacturing.

Rather than viewing individual machines and software platforms in isolation, Europlacer's presence at SMTA International will demonstrate how

Europlacer showcasing its flexible SMT manufacturing solutions at a previous industry event.

technologies across the SMT process can work together to help manufacturers increase productivity, respond more effectively to changing production requirements and gain greater insight into their operations.

Visitors are invited to meet the Europlacer team and explore its connected approach to high-mix SMT manufacturing at **Booth 2947** during SMTA International 2026.

###

About Europlacer

Europlacer is an award-winning global SMT full-line solution provider with over 50 years of engineering heritage in the electronics assembly industry. Servicing the sector with direct offices around the world and manufacturing facilities in the UK and France, Europlacer delivers flexible and dependable products to the SMT pick and place market, providing innovative solutions to complex manufacturing challenges. Europlacer is pioneering the market with great technology and a network of acknowledged experts to continue to build the long-lasting relationships that the business has thrived on for the past half-century.
