FOR IMMEDIATE RELEASE

American Hakko to Launch DPF-300-EVO with Enhanced Performance and Flexibility

VALENCIA, CA – October 2026 – American Hakko Products, Inc., a leading provider of soldering, rework and electronics assembly solutions, introduces the DPF-300-EVO, an enhanced version of its DPF-300 designed to provide greater flexibility and improved performance for production environments. The updated design incorporates four new features after more than six years of service from the original DPF-300.

“The DPF-300 has proven to be a reliable solution for our customers for many years, and the EVO updates are designed to build on that foundation while providing greater flexibility for today’s production environments,” said Kenta Fujiwara, Vice President of Sales & Marketing at American Hakko Products, Inc. “The adjustable height, increased power and updated accessories give users additional convenience and versatility while maintaining the specifications they have come to rely on.”

The DPF-300-EVO maintains the proven specifications of the existing model while introducing key design improvements. The unit’s height is now adjustable to 90, 100 or 110 cm, compared to the previous fixed height of 95 cm, providing greater flexibility for different work environments and operator requirements.

Power has also been increased from 1 kW to 1.2 kW, while amperage has been reduced from 17A to 13A. All other specifications remain unchanged, allowing users familiar with the DPF-300 to transition to the updated model with minimal changes to their existing processes.

The DPF-300-EVO also introduces a new optional shelf, Part No. DPF-CR-021, providing additional workspace and convenience. Additionally, the threaded handle, Part No. DPF-21906, has been updated and is now supplied as a two-piece set.

The DPF-300-EVO will replace the existing DPF-300-E once the current supply is depleted. The DPF-300-E part number will then be discontinued.
