FOR IMMEDIATE RELEASE**KIC to Bring Heat to Data™ and Automatic Profiling to Guadalajara Expo & Tech Forum 2026**

SAN DIEGO, CA – September 2026 – For 50 years, KIC has helped electronics manufacturers optimize thermal processes with more than 25,000 systems installed worldwide. KIC, a global leader in thermal process technologies and automatic profiling solutions, will exhibit at Guadalajara Expo & Tech Forum 2026, taking place October 7-8, 2026. Visitors are invited to Booth 502 to discover how KIC's Heat to Data™ approach transforms thermal process data into actionable manufacturing intelligence that improves product quality, increases process consistency, and enhances manufacturing performance.

As electronics continue to advance across automotive, industrial automation, telecommunications, medical devices, AI infrastructure, and countless other applications, manufacturers face increasing demands for reliability, traceability, and process control. Meeting these expectations requires precise thermal management throughout the manufacturing process to ensure consistent, high-quality solder joints and long-term product reliability.

KIC addresses these challenges through automatic profiling, continuous thermal process visibility, and intelligent analytics that provide manufacturers with real-time insight into their thermal processes. By transforming thermal process data into meaningful production intelligence, KIC helps manufacturers reduce process variation, improve first-pass yield, increase productivity, and confidently manufacture the high-reliability electronics that power today's connected world.

Visit Booth 502 to learn how KIC's Heat to Data™ ecosystem helps electronics manufacturers achieve greater process control, improve product quality, and build more reliable electronic assemblies.

###

About KIC

KIC is a global leader in thermal process technologies for electronics manufacturing. With more than five decades of innovation, KIC helps manufacturers improve thermal process control, product quality, and manufacturing performance through intelligent profiling and data-driven process optimization.
