E-Tronix to Host Komax and Schleuniger Webinar on the Quality Advantage of Intelligent Wire Processing

St. Louis Park, MN — E-Tronix, a manufacturers’ representative serving the electronics manufacturing, wire and cable, and medical device industries, will host an upcoming webinar featuring wire processing solutions from Komax and Schleuniger titled “The Quality Advantage: Driving Productivity Through Intelligent Wire Processing,” on Tuesday, November 10, 2026, at 12:00 p.m. CT. The webinar will examine how advances in intelligent automation, integrated quality monitoring, inspection, and process control are changing the way manufacturers approach wire processing.

Wire processing manufacturers continue to face pressure to increase productivity while maintaining consistent quality, managing labor challenges, accommodating changing production requirements, and controlling operating costs. As processes become increasingly automated, manufacturers have new opportunities to integrate quality assurance directly into the production process.

During the webinar, Komax and Schleuniger will explore how advances in wire processing technology can help manufacturers improve process consistency, support first-pass quality, reduce operator dependency where appropriate, and increase overall production efficiency.

The session will examine the role of integrated quality monitoring and advanced inspection technologies in providing greater visibility into key process parameters. Attendees will also learn how intelligent automation and integrated quality monitoring can support real-time quality assurance, improve traceability, and reduce process variation associated with operator-dependent tasks.

The discussion will draw on current advancements from Komax and Schleuniger to demonstrate how manufacturers can select and apply wire processing technologies based on their specific production, quality, and automation requirements. Additional topics will include strategies for maximizing equipment uptime and managing total cost of ownership.

The webinar is intended for manufacturing and process engineers, quality professionals, production and operations managers, and other wire processing professionals responsible for improving manufacturing performance.

About E-Tronix

E-Tronix is a manufacturers’ representative firm serving the electronics manufacturing, wire and cable, and medical device industries. The company is dedicated to delivering best-in-class materials and equipment that empower customers to optimize performance and achieve lasting success. With a commitment to innovation, quality, and partnership, E-Tronix stands as a trusted ally for sustainable growth.
