FOR IMMEDIATE RELEASE

PARMI USA to Discuss Laser and AI Inspection Technology at SMTA Tampa Bay and Space Coast Expos

San Diego, CA – October 2026 – PARMi, a leader in advanced 3D inspection systems, is proud to announce that it will highlight its advanced laser-based inspection technology and artificial intelligence (AI) capabilities at two upcoming SMTA events in Florida. The company will participate in the SMTA Tampa Bay Expo & Tech Forum on November 10 at the St. Petersburg Marriott Clearwater in St. Petersburg, Florida, followed by the SMTA Space Coast Expo & Tech Forum on November 12 at the Melbourne Auditorium in Melbourne, Florida.

Juan Arango and Rob Guthrie will be available to discuss PARMi's inspection solutions and demonstrate the technology through videos and presentations.

A key focus will be PARMi's proprietary laser technology, which enables high-precision 3D inspection across a range of electronics manufacturing applications. PARMi's laser line-scanning approach is designed to provide accurate 3D imaging regardless of component color, material or surface roughness, while supporting detailed measurement of solder paste and components.

PARMi's 3D inspection technology can be applied to solder paste inspection (SPI), automated optical inspection (AOI) and other inspection requirements. The company's technology also supports capabilities such as PCB warpage measurement and process optimization through feedback and feedforward data.

AI is another important element of PARMi's inspection approach. By combining advanced inspection hardware with intelligent software capabilities, PARMi aims to help manufacturers move beyond simply identifying defects toward improving process visibility, consistency and overall production quality.

"SMTA tabletop events provide us with an opportunity to have meaningful conversations about the technology behind the inspection process and how it can benefit a manufacturer's operation," said Juan Arango, Head of Sales and Business Development. "Our goal at the Tampa Bay and Space Coast events is to explain how PARMi's unique laser technology and AI capabilities can help manufacturers achieve more accurate inspection, better process control and improved quality."

About PARMi

PARMi is a manufacturer specializing in 3D inspection equipment used to improve print quality and yield in SMT production lines. Throughout its 28 year history, the company has specialized in developing in-house expertise in laser measurement and software support. PARMi is a global leader in Electronics product inspection in 3D. For more information, visit www.parmi.com.
