

PRESS RELEASE

PCBA PARTNER Releases Two Free PCB Assembly Engineering Checklists

Dongguan, China - 30 July 2026 - PCBA PARTNER has published two free engineering resources to help hardware teams prepare more complete PCB assembly quotation packages and move prototype builds into repeatable low-volume production.

1

PCBA RFQ Package Checklist

Organizes the information an assembler normally needs before issuing a decision-ready quotation: Gerber data, BOM fields, centroid data, drawings, quantities, sourcing rules, test requirements, packaging and delivery notes.

2

Prototype-to-Production Readiness Checklist

Provides stage-gate questions for teams moving from engineering prototypes into controlled low-volume builds, covering design baseline control, BOM decisions, process readiness, inspection, testing, documentation and ownership of open issues.

Engineering scope

The checklists are practical planning tools. They do not replace product-specific engineering review, qualification requirements or an agreed manufacturing specification. Their purpose is to make assumptions visible before they become quotation, sourcing, test or release delays.

About PCBA PARTNER

PCBA PARTNER is the international service brand of Dongguan Hepin Electronic Technology Co., Ltd. The Dongguan team supports overseas hardware companies with DFM review, PCB fabrication, BOM sourcing, SMT/THT assembly, inspection, testing, box build and export coordination.
