Polaris® Expands Compression Manufacturing Capacity to Meet Growing Market Demand

Reinforces the Brand's Commitment to Support the Growing Demands of Electrical Infrastructure, Data Centers, Power Distribution, and Electrification Projects Across North America

HUNTERSVILLE, N.C., Aug. 13, 2026 – **Polaris®**, the trusted name in power connectors and grounding solutions, is proud to announce a significant expansion of manufacturing capacity for its Compression Connector portfolio, reinforcing the brand's commitment to support the growing demands of electrical infrastructure, data centers, power distribution, and electrification projects across North America.

“The demand for compression connectors continues to rise as electrical systems such as those in data centers become larger, faster, and more complex,” said Nolan Bello, Director of Product Management - Polaris. “Polaris recognized this shift in the market and responded by expanding manufacturing capacity to help ensure distributors and contractors have access to the compression solutions they require and trust, and are available on time.”

The expansion further positions Polaris as a trusted source for power and grounding connections, backed by more than 40 years of proven performance and innovation. Polaris Compression Connectors are engineered for strength, reliability, and ease of installation,

offering a comprehensive portfolio of copper and aluminum lugs, splices, taps, pin terminals, and grounding solutions designed for demanding electrical applications.

“Today’s contractors need more than just connectors, they need confidence,” added Bello. “They demand certainty that product will be available, that installations will pass inspection, and that

(more)

the solutions they install will perform in critical environments. This expansion is about delivering that assurance across the entire channel.”

Polaris Compression Connectors are UL Listed for use with multiple major crimp tool brands and are designed with installer-focused features including color-coded barrels, clearly marked conductor sizing, inspection windows, corrosion-resistant tin plating, and dual-rated aluminum/copper compatibility.

As part of NSI Industries’ ONE PLEDGE program, Polaris customers also benefit from simplified business operations through one order, one shipment, and one invoice that help distributors and contractors streamline procurement and improve efficiency.

With expanded manufacturing capacity, broad tool compatibility, and a complete portfolio of power and grounding solutions, Polaris continues to strengthen its position as a responsive, dependable partner for the evolving electrical industry.

About Polaris®

Polaris® is the industry leader in power connectors and grounding solutions, trusted for performance, innovation, and compliance. From pre-insulated multi-taps to compression connectors and mechanical lugs, Polaris is engineered for the real world...delivering safe, code-compliant connections across commercial, industrial, utility, and data center applications.

About NSI Industries, LLC

NSI’s core philosophy is *Making Connections*. Focused on the electrical and building technology markets, NSI connects distributors to products, services, and technologies by providing a fresh perspective and caring approach that drives smart solutions. The driving force behind a stable of market-leading brands and a large breadth of products, the company’s primary job for more than 45 years has been to fulfill the needs of distributors and their customers. By staying grounded in the principles of service and value, NSI continues to deliver high-quality, industry-advancing, and comprehensive product solutions that enable growth.

NSI has many well-respected brands, including Bridgeport Fittings®, Polaris® Power Connectors, TORK® Timers and Controls, WarriorWrap® Professional Tape, TERMINATOR™ Premium Wire Connectors, Platinum Tools®, TechLogix Networx®, Metallics™ Fasteners, Remke®, ENET, and Lynn Electronics®.
