PRESS RELEASE November 16, 2026

PROMATION Releases Table Top Print on Demand Work Cell

KENOSHA, WI – PROMATION Inc. President & CEO Gary Goldberg announces the release of a new table top “Print on Demand” label print, validate and place, work cell.

The LABEL PRO provides accurate and clear label placement onto PCBs or components through an integrated Micro Label Zebra 600 DPI printer and servo gantry.

The integrated PCB fixture can hold sizes up to 400 mm x 400 mm eliminating the need for dedicated fixtures. The color CCD camera is used for both PCB Mapping (for on screen programming) and fiducial alignment for highly accurate placement.

An overhead Cognex reader is used to validate readability and can also output data to a network (with MES network hook up). A “three try” re-print feature is also included to allow for printer media and ribbon self-reset after replacement.

The KEY benefits of the system are: small label print handling (6 mm x 6 mm) up to (75 mm x 50 mm), 600 DPI print quality, label validation, MES Ready for data in data out, accurate placement each time with rotation and Z height, and Utilization. Most customers will experience a 35~40% increase in output (vs Operator) since the robot will not tire.

For more details contact your local area representative or reach out to PROMATION directly at Sales@PROMATIONUSA.com or (262) 764-4832.
