PVA Earns Dual 2026 Service Excellence Awards Ahead of DeltaFlex™ Showcase at The Battery Show North America

HALFMOON, NY – September 2026 – PVA, a global supplier of automated dispensing and coating equipment, has earned two 2026 CIRCUITS ASSEMBLY Service Excellence Awards (SEAs), receiving recognition in both the Automation and Handling Equipment **and** Dispensing categories.

The awards were presented during the Service Excellence Awards ceremony on September 29 at the Santa Clara Convention Center during PCB West 2026.

Receiving recognition across two categories highlights the breadth of PVA's work supporting manufacturers with automated solutions for demanding production applications. The Service Excellence Awards are determined by direct customer feedback, making the recognition a reflection of customers' experiences working with PVA and its team.

"Receiving two Service Excellence Awards is particularly meaningful because this recognition comes directly from our customers," said Kimberly Fagan-Riley, Marketing Communication Manager at PVA. "Our focus has always been on providing customers with the right technology and the support they need to achieve reliable, repeatable processes. To be recognized in both Automation and Handling Equipment and Dispensing is a tremendous acknowledgment of the work our team puts into supporting customers every day."

PVA provides automated dispensing and coating equipment used across electronics manufacturing, with solutions designed to support process control, material handling and repeatability. Its dispensing technologies address applications requiring accurate material application, controlled flow and long-term process stability.

The awards reflect PVA's approach to combining precision automation with application expertise and customer support, helping manufacturers address production requirements from laboratory applications through advanced production systems.

The dual recognition comes as PVA prepares to showcase its newest automation platform, the DeltaFlex™, at **The Battery Show North America** in Detroit, Michigan, October 13-15, 2026. Designed for oversized, complex and high-reliability manufacturing applications, the DeltaFlex expands PVA's automation portfolio with a large-format dispensing and coating platform engineered to meet the evolving demands of industries including EV battery manufacturing, aerospace, defense, telecommunications, industrial electronics and electronics manufacturing services.

"Our customers continue to push the boundaries of what's possible in manufacturing, and that's what drives innovation at PVA," said Rod Kasperson, Vice President of Sales & Marketing. "The same commitment to customer success that earned these Service Excellence Awards is reflected in the development of DeltaFlex. We've designed the platform to help manufacturers address increasingly complex applications while maintaining the performance, flexibility and reliability they expect from PVA."

Attendees of The Battery Show North America are invited to visit **PVA at Booth 6405** to learn more about DeltaFlex and PVA's complete portfolio of dispensing, conformal coating and automation solutions designed to support next-generation battery and electronics manufacturing.

About

PVA's customer driven solutions are utilized worldwide in applications for printed circuit assembly, semiconductor packaging, medical device manufacturing, telecommunications, solar, and consumer electronics. Throughout the changing global manufacturing landscape, from laboratory applications to advanced production systems, PVA provides technologies that deliver unmatched precision and reliability.
