FOR IMMEDIATE RELEASE

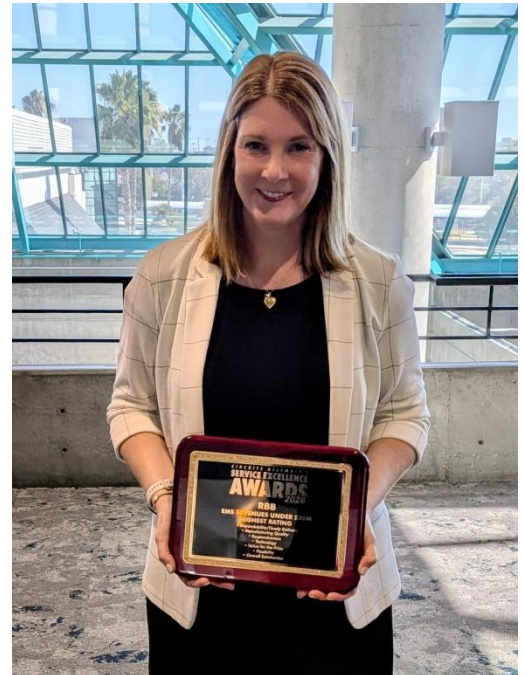

RBB Earns 2026 Service Excellence Award Across Seven Customer-Rated Categories

WOOSTER, OH — September 2026 — RBB, a trusted electronics manufacturing company serving customers since 1973, has been recognized with a 2026 CIRCUITS ASSEMBLY Service Excellence Award (SEA) in the EMS Under \$20 Million category. RBB earned recognition across seven areas: Dependability/Timely Delivery, Manufacturing Quality, Responsiveness, Technology, Value for the Price, Flexibility and Overall Satisfaction.

The 2026 recognition continues RBB's strong track record in the Service Excellence Awards and follows its 2025 recognition for Best Overall – EMS Under \$20 Million. Determined entirely by direct customer feedback, the awards provide an opportunity for the customers themselves to evaluate the service and support they receive from their manufacturing partners.

The award was presented during the Service Excellence Awards ceremony on September 29 at the Santa Clara Convention Center during PCB West 2026.

“Being recognized across such a broad range of areas means a great deal to our team because this feedback comes directly from our customers,” said Bruce Hendrick, Owner & CEO of RBB. “Our goal is to be the kind of manufacturing partner customers can depend on, from responding quickly when requirements change to maintaining quality and finding the right solution for complex builds. This recognition reflects the care and commitment our team brings to those relationships every day.”

RBB specializes in low-to-mid volume production, delivering precision and reliability for complex electronic assemblies across a wide range of industries. The company supports both turnkey and consignment projects, offering flexible engagement models for prototypes, short runs and long-term production programmes. Its capabilities include surface mount (SMT) and through-hole assembly, with particular expertise in mixed-technology builds.

Beyond PCB assembly, RBB operates a UL 508A certified panel shop, providing electromechanical integration and control solutions that complement its board-level manufacturing. Every assembly is supported by advanced process controls, rigorous testing and collaborative engineering to support quality, reliability and performance.
