FOR IMMEDIATE RELEASE

SASinno America Expands into Mexico with New Guadalajara Facility

New location to serve as showroom, demonstration center and training facility for soldering and electronics manufacturing solutions

WASHINGTON, MO – September 2026 – SASinno Americas, a provider of advanced soldering solutions for the electronics manufacturing industry, is expanding its presence in North America with the opening of a new facility in the Guadalajara area. The company will celebrate the grand opening of the facility on October 5, 2026.

Located at Av. Lopez Mateos Sur 7023, Plaza la Plaza Local 3, Outlet del Calzado, Col. Nicolas R. Casillas, 45645 Tlajomulco de Zúñiga, Jalisco, Mexico, the new location will serve as a customer support facility, showroom, training center and demonstration center.

SASinno America provides soldering and electronics manufacturing solutions, including wave soldering machines, selective soldering systems and laser marking equipment, as well as the spare parts, consumables and technical support required to help customers maintain efficient manufacturing operations.

The company's expansion into Mexico follows continued growth in the United States. SASinno America began operations in Missouri from a small facility and subsequently expanded into a larger location as customer demand and sales increased. The expanded U.S. operation strengthened the company's ability to support customers and further established its presence in the electronics manufacturing market.

The new Mexico facility represents the next stage of SASinno America's growth. Customers will be able to visit the location to see equipment and solutions firsthand, participate in training, observe demonstrations and work directly with the SASinno America team to evaluate solutions for their specific manufacturing requirements.

Guadalajara was selected for the expansion because of its importance as a center for electronics and advanced manufacturing in Mexico. The region's concentration of electronics manufacturers and suppliers provides SASinno America with an opportunity to establish a dedicated local presence closer to existing and prospective customers.

“With the opening of this new facility, SASinno America is taking an important step in expanding the level of local support available to electronics manufacturers in Mexico,” said Mike Young, CEO/GM. “Our goal is to give customers direct access not only to equipment, spare parts and consumables, but also to demonstrations, training, technical knowledge and hands-on support. We want to help customers make informed decisions and continuously improve their manufacturing processes.”

The Guadalajara-area facility is designed to provide customers with a more direct connection to SASinno America’s equipment, expertise and support resources. In addition to serving as a demonstration and training center, the location will strengthen the company’s ability to provide technical and commercial support to manufacturers throughout Mexico.
