FOR IMMEDIATE RELEASE

SCS to Highlight Comprehensive Manufacturing Line Solutions at SMTA International 2026

September 2026 (Indianapolis, IN) – Specialty Coating Systems (SCS) will highlight its comprehensive coating, dispensing, curing and material handling solutions in Booth 2513 during SMTA International 2026, demonstrating how its equipment platforms can be integrated to provide manufacturers with flexible, efficient production line solutions.

In addition to stand-alone equipment, SCS offers integrated manufacturing solutions designed to accommodate a wide range of electronic assembly and production requirements. SCS PrecisionCoat®, PrecisionCure and PrecisionAdvance systems can be configured in various combinations to meet specific customer processes, with SMEMA, CFX or proprietary communication protocols enabling integration with additional production line equipment.

Available for conformal coating, dispensing and/or potting applications, the **SCS PrecisionCoat VI** provides manufacturers with flexibility across a range of production requirements. Its coating and dispensing valves move along a three-axis system, with optional fully programmable fourth and fifth axes providing additional tilt and rotation capabilities. The system's Automatic Quick Change (AQC) feature supports up to eight separate tools, enabling multiple materials and application processes to be automated within a single coating profile or system.

SCS also offers a range of **PrecisionCure** technologies to accommodate different material and process requirements. These include the PrecisionCure UVC (MUV), which utilizes Heraeus Noblelight® microwave-activated UV lamps and programmable curing profiles, as well as PrecisionCure systems featuring IR thermal and ARC UV curing technologies. The systems can operate independently or be integrated with SCS PrecisionCoat and PrecisionAdvance equipment as part of a customized manufacturing solution.

Completing SCS's comprehensive line capabilities, **SCS PrecisionAdvance** conveyors are designed to efficiently manage product movement throughout coating and assembly operations. Available in line-load, pass-through, inspection and accumulation conveyor/buffer configurations, the modular systems can be integrated to automate and streamline circuit board movement through the manufacturing process.

Through PrecisionCoat control software, product flow information can be communicated throughout an integrated SCS process line, including line width, speed and curing programs. This enables individual components to be automatically configured for each product while eliminating the need for an external automation line manager.

By combining coating, dispensing, curing and material handling technologies within configurable production lines, SCS provides manufacturers with solutions designed around their individual processes and production requirements.

About Specialty Coating Systems

Headquartered in Indianapolis, Indiana, Specialty Coating Systems offers industry-leading liquid coating systems, including spray, spin and dip coating systems, thermal and UV cure systems and ionic contamination test systems. SCS also offers world-leading conformal coating services, systems and materials with 55 years of application experience and expertise in the medical device, electronics, transportation and defense industries. With locations throughout the Americas, Europe and Asia, SCS leverages its worldwide resources to meet customer needs on a global basis. To find out more about SCS and its leading product lines, visit scsequip.com.
