

SEHO Systems Strengthens Its Position in India with NMTronics Partnership

Kreuzwertheim, Germany – September 2026

SEHO Systems GmbH is expanding its presence in the Indian electronics manufacturing market through a new strategic partnership with NMTronics India Pvt. Ltd. The cooperation combines SEHO's expertise in complete solutions for soldering processes and automated production lines with NMTronics' established sales, service and customer network in India.

The partnership will make its public debut at Productronica India in Bangalore in September 2026, where SEHO will display its StartSelective system at the NMTronics **booth H4.C01**. Following the exhibition, the machine will be installed at NMTronics' demonstration center, giving customers in India direct access to SEHO technology for demonstrations and application evaluations.

The partnership will extend beyond the initial system. Further SEHO machines are planned for the NMTronics demonstration center, creating a permanent platform for showcasing SEHO's complete solutions to the Indian market.

"India is an important market for the future of electronics manufacturing, and we see significant opportunities to expand our activities there," says Lena Walter, CCO of SEHO Systems GmbH. "NMTronics has a strong position in the Indian market and the infrastructure to support customers locally. With the partnership and the installation of the StartSelective, we are creating direct access to SEHO technology for Indian manufacturers."

The cooperation with NMTronics also builds on an existing relationship between Heller Industries and NMTronics. Heller is a long-standing strategic partner of SEHO and has already established its own presence in the Indian market together with NMTronics. This connection provides an additional basis for SEHO to develop its activities in India and to work closely with established partners on the ground.

As part of its expansion in India, SEHO will also establish local production of its wave soldering systems at Heller Industries' manufacturing facility in India. The planned production builds on the existing cooperation between SEHO and Heller, with the SelectLine-S currently being manufactured at Heller's facility in China. Expanding this cooperation to India will further strengthen SEHO's local capabilities and enable the company to support the Indian market with shorter supply routes and increased local availability.

With NMTronics and Heller Industries as strong local partners, SEHO is building on an established network that connects market access, technical expertise and manufacturing capabilities. Together, these relationships create new opportunities for SEHO to develop its activities in India and further strengthen its position in the region.

**About SEHO Systems GmbH**

Founded in 1976, SEHO is a leading manufacturer of selective and wave soldering solutions, factory automation technology, and THT-AOI systems for the electronics manufacturing industry. The company provides complete solutions for flexible, efficient and fully connected manufacturing processes. SEHO is recognized for its innovative technologies, modular system architectures, and reliable, high-quality results, working closely with customers as long-term partners to optimize production processes. About Heller Industries

Heller Industries is a global leader in advanced thermal processing equipment for the electronics and semiconductor industries. Headquartered in Florham Park, New Jersey, Heller maintains manufacturing, sales, engineering, service, and customer demonstration facilities in Shanghai, China, and Suwon, Korea, and is expanding its global footprint with a new factory and office in Ahmedabad, India. The company designs and manufactures high-performance reflow ovens, curing systems, and precision thermal solutions used in printed circuit board assembly, semiconductor packaging, and advanced electronics manufacturing worldwide.

About NMTronics India Pvt. Limited

Founded in 1999, NMTronics India Pvt. Limited is a leading provider of advanced equipment, automation solutions, and technical services for the electronics manufacturing industry. With a strong pan-India sales and service network, experienced application and support teams, and state-of-the-art demonstration and training centres, NMTronics supports customers throughout the complete manufacturing lifecycle—from technology evaluation and process development to installation, training, and after-sales service.

Under its guiding philosophy, "Partners in Technology," NMTronics collaborates with leading global technology companies to deliver innovative and reliable manufacturing solutions to customers across the automotive, consumer electronics, telecommunications, industrial, semiconductor, aerospace, defence, and emerging electronics sectors. The company is committed to advancing electronics manufacturing in India through world-class technologies, localized support, technical expertise, and long-term customer partnerships.
