Seika Machinery Announces Limited-Time Inventory Sale on SAWA Ultrasonic Stencil Cleaners and McDry Storage Cabinets

TORRANCE, CA — September 2026 — Seika Machinery, Inc., a leading provider of advanced machinery, materials and engineering services, is offering special inventory-sale pricing on select SAWA ultrasonic stencil cleaners and McDry MCU-201A humidity-controlled storage cabinets. Available while supplies last, the limited-time offers provide electronics manufacturers with an opportunity to add proven cleaning and moisture-control equipment at special pricing.

As part of the inventory sale, Seika is offering a one-time 20% discount on SAWA SC-500HE and SC-5000GUS ultrasonic stencil cleaners. The company is also offering waived tariff charges on MCU-201A McDry cabinets for the duration of the inventory sale.

SAWA Ultrasonic Stencil Cleaners

The SAWA SC-500HE and SC-5000GUS are handheld ultrasonic cleaning solutions designed to remove solder balls and other contaminants from stencil apertures following conventional wipe cleaning. Both systems use a handheld ultrasonic cleaning head applied directly over the stencil apertures with IPA, water or a non-VOC solvent.

The SAWA SC-500HE is a compact, portable solution that can clean stencils without removing them from the printing machine. Its small handheld cleaning head and lightweight design make it suited for convenient, targeted stencil cleaning, with cleaning typically completed in just a few minutes.

The larger SAWA SC-5000GUS provides direct ultrasonic vibration to the stencil for powerful aperture cleaning. The system includes a larger tray designed to accommodate a full 32 x 32" stencil and is designed to provide effective cleaning in just a few minutes.

MCU-201A McDry Humidity-Controlled Storage Cabinet

Also included in the inventory sale is the McDry MCU-201A, a humidity-controlled dry cabinet designed for long-term, moisture-proof storage in manufacturing environments with relatively low door-opening frequency. The cabinet can maintain humidity at 1% RH and features a digital RH meter, locking doors, adjustable shelves capable of holding up to 110 pounds, and grounded construction for ESD protection.

McDry cabinets are designed to provide ultra-low humidity storage for moisture-sensitive electronics and other materials. The McDry cabinets can help protect sensitive components from moisture-related issues and are designed for applications involving materials such as printed wiring boards, tape reels, feeders and other electronic components.

The special offers are available while supplies last and are subject to inventory availability. Customers interested in the SAWA SC-500HE, SAWA SC-5000GUS or McDry MCU-201A inventory sale can contact Seika Machinery Inc. at www.seikausa.com for pricing, availability and additional information.
