For Immediate Release

Adaptsys Group Brings High-Precision Automation to Micronora 2026 with Award-Winning 3DInspect

Hampshire, UK – August 2026 – The Adaptsys Group will exhibit its award-winning 3DInspect automated inspection system at Micronora, taking place September 29 through October 2, 2026, in Besançon.

Micronora is a leading international event dedicated to precision engineering, miniaturization, and the integration of complex functions—making it an ideal platform to showcase innovations that improve quality and efficiency in microtechnology manufacturing.

At the exhibition, Adaptsys will highlight 3DInspect, an advanced system designed to automate carrier tape inspection and reporting. Developed to eliminate bottlenecks in verification processes, 3DInspect replaces manual measurement and handwritten documentation with a fast, repeatable digital workflow.

The system enables manufacturers to complete inspection and generate Certificates of Conformance (CoCs) in approximately one minute—compared to up to 30 minutes using traditional methods—while improving accuracy, consistency, and traceability.

Visitors to the show will have the opportunity to learn how 3DInspect supports high-value and sensitive component handling by standardizing measurement and delivering clear, reliable documentation for quality assurance and customer compliance.
