

FOR IMMEDIATE RELEASE

Test Research, Inc. to Showcase High-Speed Inspection and Test Solutions at SMTA Guadalajara 2026

[September 2, 2026 – Guadalajara, Mexico] Test Research, Inc. (TRI) will exhibit at SMTA Guadalajara Expo 2026, highlighting its latest award-winning solutions for electronics manufacturing. Visit Booth 622 at Expo Guadalajara, October 7-8, 2026, to see TRI's newest test and inspection innovations in action.

TRI will feature its high-speed 3D AOI system, the [TR7700QH SII](#), alongside the award-winning [TR7007QI Plus](#) 3D solder paste inspection solution. The TR7700QH SII is among the fastest AOI systems available, achieving inspection speeds of up to 80 cm²/sec. Also on display will be the ultra-high-speed [TR7600LL SV](#) 3D inline automated X-ray inspection system.

TRI's inspection platforms combine advanced metrology with AI-driven algorithms to improve accuracy, consistency, and overall production efficiency.

In addition to inspection solutions, TRI will present its [TR5001 SII](#) In-Circuit Test system. TRI's board test solutions support a full range of applications, from MDA and functional test to high-pin-count ICT, serving a wide variety of electronics manufacturing environments.

TRI's [AI ecosystem](#) includes tools such as AI Station, Verify Host, and AI Smart Programming, designed to streamline programming, reduce setup time, and enhance inspection performance. All TRI systems are built to support modern [Smart Factory](#) initiatives and comply with industry standards including IPC-HERMES-9852, IPC-CFX, and IPC-DPMX.

Visit Booth 622 to learn why leading EMS providers rely on TRI as their trusted partner for PCB assembly test and inspection.
