

FOR IMMEDIATE RELEASE

VJ Electronix Appoints Process Automation & Tool as Southeast Representative

August 2026 — VJ Electronix, Inc., the leader in rework technologies, announces that it has appointed Process Automation & Tool, LLC (PAT) as its authorized representative for Georgia, Mississippi, Alabama and Tennessee. The partnership expands VJ Electronix's throughout the Southeast and strengthens local access to its growing portfolio of advanced rework solutions.

Founded in 1998, Process Automation & Tool provides equipment and process solutions to manufacturers across the Southeast, with expertise spanning SMT, electronic assembly, automotive assembly and automation markets. The company serves a broad range of customers, including mid- and high-volume EMS providers, OEMs, medical manufacturers and military organizations. With its extensive regional coverage and focus on process knowledge and customer support, PAT is well positioned to help manufacturers address increasingly complex electronics manufacturing and rework requirements.

The partnership will help strengthen VJ Electronix's increased focus on advanced rework technology. As electronics assemblies become larger, more complex and more expensive, manufacturers are placing greater emphasis on precise, repeatable rework processes that can help minimize scrap, protect high-value assemblies and maintain production continuity.

“Process Automation & Tool is an excellent fit for VJ Electronix,” said Don Naugler, General Manager of VJ Electronix. “Andy and the PAT team bring tremendous industry experience and a strong understanding of the manufacturers throughout this region. Their technical background and established customer relationships will allow us to provide even stronger local support while helping customers find the right rework solutions for increasingly demanding applications.”

The PAT team has a combined 100+ years of experience in the electronics manufacturing industry, providing solutions for their customers across the SMT and Repair & Rework marketplaces. Additionally, its hands-on technical experience and industry knowledge provide for a strong foundation when supporting customers evaluating advanced rework technologies.

“We are excited to add VJ Electronix to our portfolio and to bring its rework technology to customers throughout Georgia, Mississippi, Alabama and Tennessee,” said Andy Tressler, Partner at Process Automation & Tool. “The challenges manufacturers face today are becoming more complex, particularly as assemblies incorporate larger components, higher-value devices and increasingly demanding thermal and process requirements. VJ Electronix has developed rework solutions that address these challenges while helping manufacturers improve precision, repeatability and process control. We look forward to introducing these capabilities to our customers and working with the VJ Electronix team to support their rework requirements.”

VJ Electronix’s portfolio includes precision PCB and BGA rework systems designed to address a wide range of applications, from component-level repair to large-format and advanced-package rework. The company’s latest technologies are designed to provide manufacturers with greater process control, improved thermal performance and repeatable results for high-value assemblies.

The addition of PAT further expands VJ Electronix’s growing U.S. representative network as the company continues to strengthen customer support and market coverage. The partnership will enable manufacturers throughout the Southeast to work directly with a knowledgeable regional resource while gaining access to VJ Electronix’s rework expertise and application support.
