PRESS RELEASE FOR IMMEDIATE RELEASE AUGUST 10, 2026

ZERO DEFECTS INTERNATIONAL DOUBLES PCBA TESTING SERVICE CAPACITY

SILICON VALLEY: Zero Defects International [ZDI] has announced a significant testing capacity increase for flying-probe ICT services. This addition of new state-of-the-art equipment enables ZDI to actually more than double throughput due to its coupling with higher equipment speed, new operational efficiencies as well as key personnel additions. These upgrades and additions were necessitated by higher level demands from the existing customer base and new customer acquisitions as well. Further benefits of the new test system include greater precision in terms of the printed circuit board assembly [PCBA] fine feature access and also enhanced parametric capabilities.

ZDI is a well established sales and services company specializing in the fields of PCBA test and inspection as well as some printed circuit board [PCB] services. Primary equipment partners are Viscom, Europlacer, Tagarno and a leading manufacturer of flying-probe testers. Additionally, ZDI offers comprehensive flying-probe and functional contract testing services.
